Art Unit: 2124

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.⁷

Claims 1, 4, 8-9, 11 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's Fig. 1 (Prior Art).

As per independent claim 1, Fig. 1 discloses the invention substantially as claimed, including: a plurality of propagate circuits (P3), a plurality of generate circuits (G3) and carry look ahead logic (400). It is noted that Fig. 1 does NOT disclose the claimed (1) plurality of carry-create signals "J3", and (2) plurality of carry-transmit signals "T3" **wherein the first groups of bit pairings are different from the second groups of bit pairing**; however, the examiner analyzes the Fig. 1 as follow: (1) propagate circuits having bits 11-9 & 5-3, (2) generate circuits having bits 8-6 & 2-0 are the same as ⁽¹⁾ the plurality of carry-create signals "J3", and (2) plurality of carry-transmit signals "T3". Therefore, the claim read on Applicant's Fig. 1. It would have been obvious to a person having ordinary skill in the art at the time the invention was made to design the claimed invention according to Applicant's Fig. 1 teachings because Fig. 1 discloses a carry look ahead having "block look ahead" as claimed.

As per dependent claim 4, Fig. 1 shows the claimed feature.

Due to the similarity of claims 8 and 13 to claims 1 and 4, they are rejected under a similar rationale.

As per dependent claim 9, the claim adds "means for generating the carry-create signal has a stack height of two". The feature is obvious to a logic designer to implementing the circuit in transistor level.

As per dependent claim 11, the claim adds "means for generating the carry-transmit signal has a stack height of three". The feature is obvious to a logic designer to implementing the circuit in transistor level.

3. Claims 2-3, 5-7, 10, 12 and 14-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Cited references are art of interest.

5. The following is an examiner's statement of reasons for allowance: the recorded references do NOT teach or suggest: (1) the detail "logic express" as recited in dependent claims 2 & 10; (2) the detail "logic express" as recited in dependent claims 3 & 12; (3) the detail structure of dependent claims 5, 7, 14 & 16 and (4) the detail "logic expresses" in independent claim 17.
